

## Re•tro•fit:

verb - to install (new parts)  
in something previously  
manufactured or constructed

You talked. We listened. You wanted easier sanitation of the gates and you wanted the sanitation process to be quicker. You wanted to just retrofit this new gate into your existing Slipstick® Horizontal Motion Conveyors. The Triple/S Field Service Team had ideas about this new gate and set out to build one for our Test Lab. The new Eco-Gate is tool-less and opens from the side of the conveyor. One major food manufacturer retrofitted one Eco-Gate as a test and liked it so much they installed 15 more!

Call us today at **1.800.527.2116**, and see how our retrofit can save you time and money.

*It was your idea.*
