VERSA-LIFTS®

The Versa-Lift® was designed specifically for moving heavy machinery smoothly and safely on solid surfaces. The Versa-Lift®, like its name signifies, is a very unique forklift in which the frame extends in order to achieve greater capacities and is equipped with a removable hydraulic boom. We also offer an electric model.

TRAKSPORTERS

This revolutionary new equipment mover does big things in a small package. The Traksporster eliminates all of the pushing, pulling, and bumping of your large equipment. The tiny track navigates loads from 60,000 to 100,000 lbs. by remote and hydraulic power.

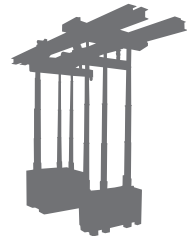

LARGEST INVENTORY OF VERSA-LIFTS IN THE NATION

HYDRAULIC GANTRIES

60-600 TON CAPACITY

Our hydraulic gantries can be delivered to the site on one truck. Once at the site a gantry can be set up and ready to operate in less than two hours. The lift's two legs can be operated simultaneously with a single control stick.

RIGGER-LIFTS

The Rigger Lift® is the brute of forklifts, lifting up to 120,000 lbs. It picks up where the maximum capabilities of the forklift end. The Rigger Lift's® single, solid-rubber drive tires reduce floor loading, provide better traction on uneven/wet conditions, and eliminate the need for steel plating floors.
