

SaniClean's Basket Strainers feature a machined neckline for the inner basket to seat on and seal. A machined neckline provides positive seating of the strainer basket and permits the strainer assembly to operate safely at high pressures while increasing output without additional processing equipment. The strainers can be fitted with perforated strainer baskets, wire mesh liner baskets, wedge wire baskets, or filter bags.

SaniClean Basket Strainers are available in the "industry proven" high capacity sizes (short and long) as well as in other standard filter bag sizes. SaniClean's basket strainer housings can be fitted with any of four basket strainer sizes; a perforated basket, perforated with a wire mesh liner basket, wedge wire, or for use with a filter bag.
