

Safer food

Comes from safer designs

To ensure uptime and safe food production, don't let bearings be the weak link in your process. Dodge® Food Safe bearings are the first to achieve IP69 for water protection rating without the use of an end cover and be warranted against failure due to water ingress; making them ideal in environments where equipment must be aggressively cleaned. Dodge Food Safe bearings improve reliability of clean-in-place procedures and provide you, and your customers, with the safe production you expect.

Improved cleanability. Extended life. Reduced maintenance.
