

Biowater Technology's Continuous Flow Intermittent Cleaning CFIC® Biofilm Process...

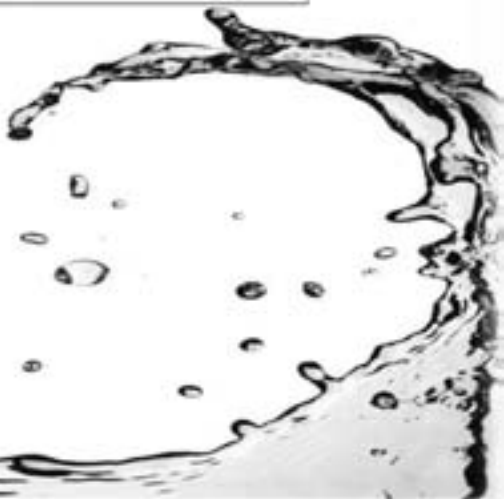

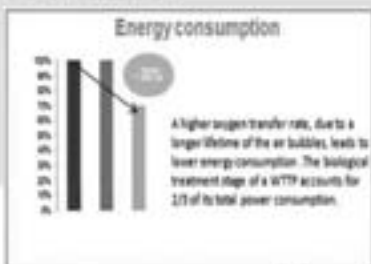

The CFIC® Process is designed to increase treatment capacity while reducing footprint and overall energy costs. Our R&D partners are committed to bringing new technologies to market that benefit the environment and your bottom line.

Helping you meet your wastewater requirements...with Biofilm.

Benefits of CFIC® Biofilm Process:

- Low Effluent TSS Concentration
- Controlled Wasting
- Overall OPEX/CAPEX savings of over 30 %.
- Continuous Forward Flow (no downtime and no backwash like filters).
- Significantly smaller footprint than MBBR and Conventional AS treatment plants.

Complete Biological Process Solutions • System Upgrades • New Construction • Treatability Studies and Piloting • Package Plants
